COVER LETTER

INTERNSHIP •

Cover letter,

I am currently averaging just below a 2:1 at 57-58 percent but I am hopeful with a little more effort I will be able to average at over 60% this semester.

I am currently in 2nd year of computer science and next year have a mandatory internship semester.

I am hoping that this opportunity will allow me to use skills learned in lectures and in my own time in a more professional setting while teaching me more about what a career in computer science will look like in my near future. Also working alongside people interning will be very useful for what interning next year will entail too.

I am currently a Stem Aspire mentee at dell, this involves getting a personal mentor who assists me with working my way through college work and improving my cv etc. this program also provides me with insight into daily lives of software developers and those they work alongside too. The workshops and talks are motivating and often very engaging.

I am also a recipient of the J & J WiSTEM2D Award 2024.

Csc advanced coding competition 1st place

I am considered a hard work who gets along with peers and pick up new skills quickly and I would love to have the opportunity to take part in this program too.

I have also volunteered at my University Csc to tutor 1st year students in different modules, I've done similar in the CoderDojo to help kids get into coding and hopefully inspire the younger generation to take up an interest in coding too.

Sincerely,
Sophia Ugwa
